General Purpose

General Purpose Accelerometers

General purpose accelerometers sense vibration commonly found in most industrial machinery. Applications include monitoring of motors, fans, pumps, moderate speed gearboxes, machine tool spindles, and paper machine rolls. Measurements on these types of machines require a broad frequency range, moderate amplitude range and moderate sensor noise floors.

The General Purpose Accelerometers are categorized by the following.

PREMIUM

Premium sensors are engineered for the best reliability, longest life and have the tightest tolerances. They incorporate protective electronic circuitry to reduce the effects of sensor mechanical resonance causing an overload to the built-in amplifier. They also have circuitry to protect the sensor against high electrostatic voltages, reversed wiring (power and common connected backward), and mis-wiring (no constant-current diode). Calibration data is provided for BOV, sensitivity, frequency response, and resonance frequency.

STANDARD

Standard sensors are engineered for good reliability, long life and have tolerances acceptable to industry expectations. Many incorporate protective electronic circuitry to reduce the effects of sensor mechanical resonance causing an overload to the built-in amplifier. They also have circuitry to protect the sensor against high electrostatic voltages and reversed wiring (power and common connected backward). Calibration data is provided for BOV and sensitivity.

ECONOMY

Economy sensors are engineered for good reliability and long life. They are typically characterized by wider sensitivity tolerances to allow for more economical manufacturing. They also have circuitry to protect the sensor against high electrostatic voltages and reversed wiring (power and common connected backward). Calibration data is provided for BOV and sensitivity.

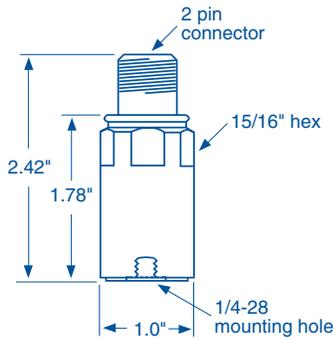

SPECIALTY

Specialty sensors are accelerometers that have been developed to fulfill specific customer needs. These needs vary by form, fit or function and include such changes as temperature range, mechanical packaging, or frequency response. The delineating characteristic of the specialty sensor is that it is engineered for a particular application.

FEATURES:

- Corrosion resistant
