

T10F

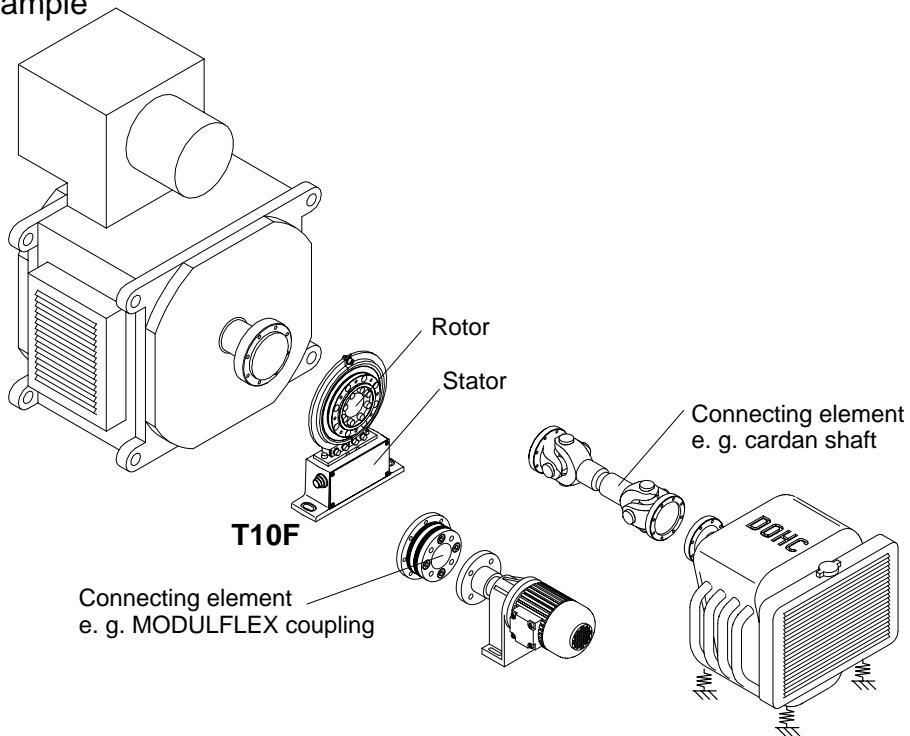

Torque Flange

Special features

- Extremely short design
- High permissible dynamic loads
- High permissible transverse forces and bending moments
- Very high torsional stiffness
- Contactless
- Selectable calibration signal
- Integral speed measurement (option)

4.) Each type of irregular stress (bending moment, lateral or axial load, exceeding the nominal torque) can only be permitted with its given static load limit if none of the others can occur. Otherwise the limit values must be reduced. If for instance 30 % of the bending limit moment and also 30 % of the lateral limit force are present, only 40 % of the axial limit force are permitted, provided that the nominal torque is not exceeded. With the permitted bending moments, axial and lateral limit forces, measuring errors of about 1 % of the nominal torque can occur.

5.) With T10F/50 N·m the nominal torque may be exceeded by 100 %, with T10F/100 N·m up to 10 kN·m the nominal torque may not be exceeded.

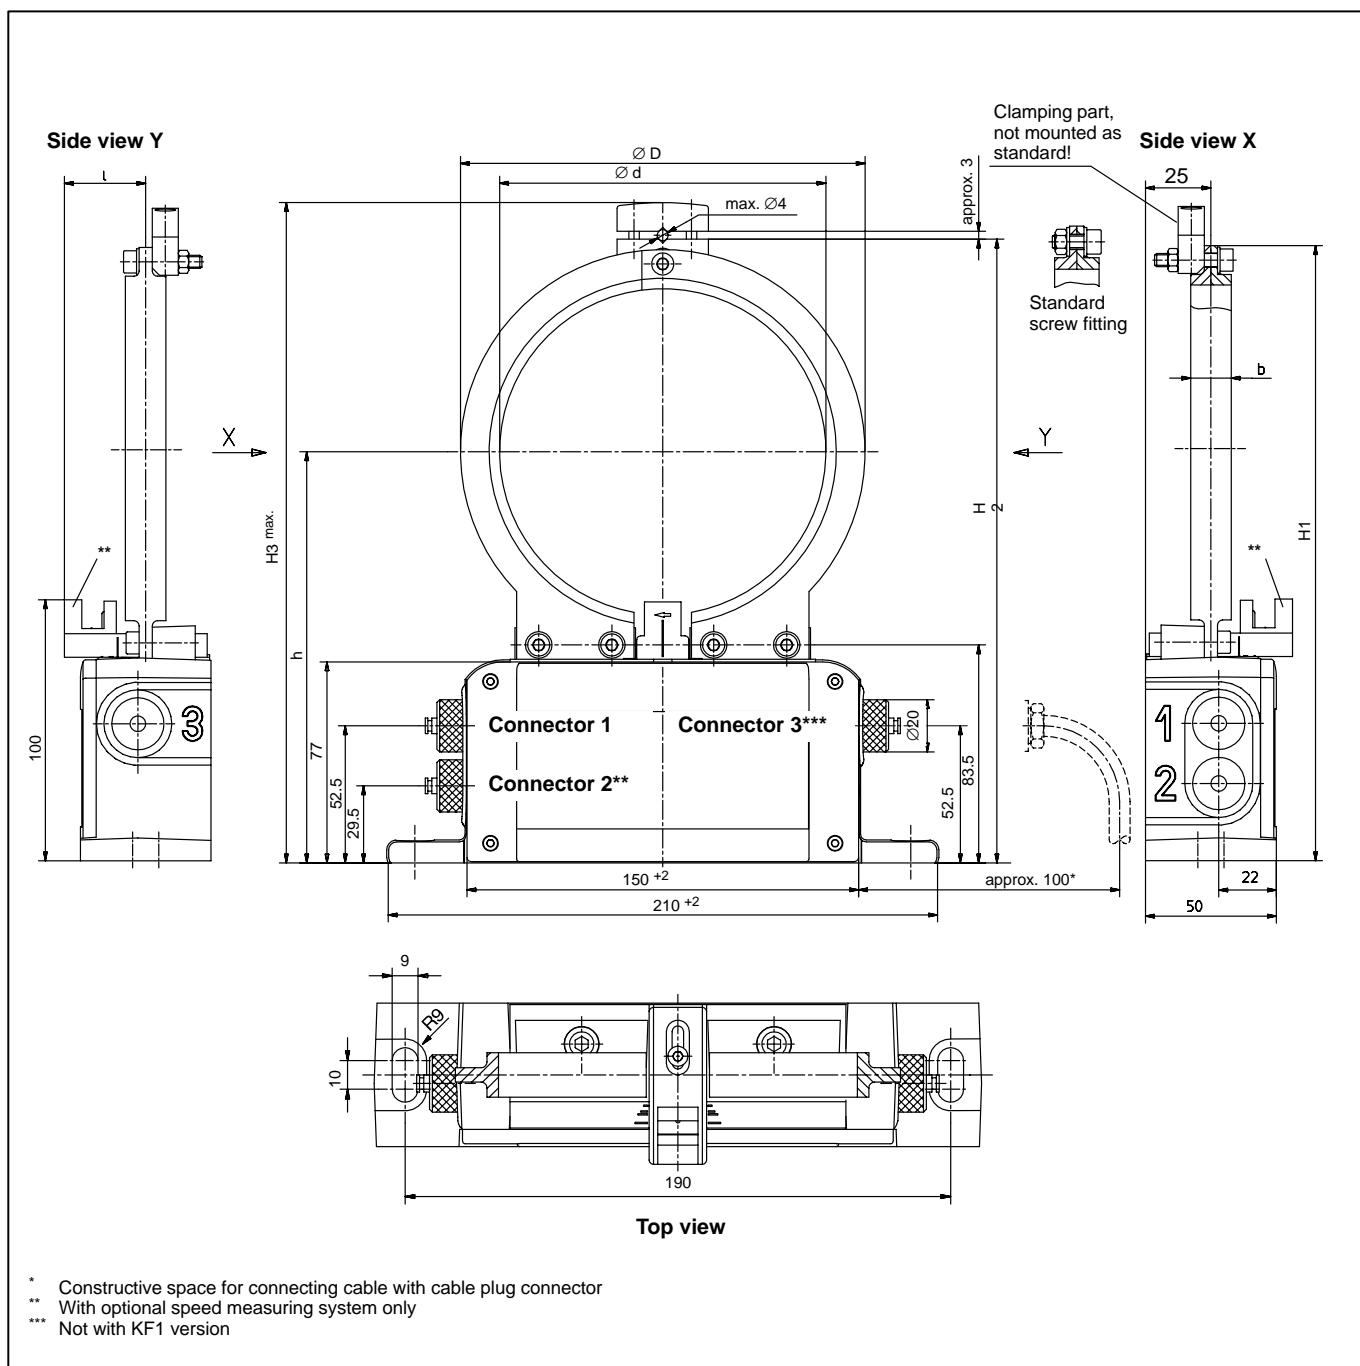

6.) Relative undulations within the range of the adapter flange in accordance with DIN 45670/VDI 2059.

7.) See restricted values with speed measuring system.
